Adrenal Recovery Support Program

Experience: more energy, weight loss, improved skin, greater focus, and better sleep.
Why do we offer this program?

Our practice witnesses the following patterns:

• Fatigue
• Emotional and Physical Stress
• Sleep Disorders
• Pain

Do you know that these can be symptoms of adrenal fatigue?
Your Guide:

This 32-page booklet is an educational tool to jump-start communication and facilitate change. Please have it ready!

We will cover:

• History of Stress
• Energy Production
• Adrenal Testing Procedures
• Our Program
History of Stress

How can a zebra be hunted by a lion and then minutes later drink from the same watering hole?

What lions are you running from?

- Bad Diet
- Financial Problems
- Relationship Problems
- Work
- Toxicity
- Exercise

Now complete page 5 of your guide
How do you react to stress?

Our central nervous system is a survival mechanism born out of a “fight or flight” response.

**Sympathetic Division**
- Stomach Problems
- Cold Sweats
- Loose Stools
- Body “Racing”
- Incomplete Digestion

**Parasympathetic Division**
- Slow Pulse
- Tears and Saliva Increased
- Restless Legs at Night
- Low Back Pain
- Histamine Activity
Which body type do you fit?

The adrenal body type changes with stress:

NORMAL | STAGE 1 | STAGE 2 | STAGE 3

Courtesy of Dr. Eric Berg, DC - www.drberg.com
Are you running out of gas?

Dr. Hans Selye, MD, found a relationship between the resistance to stress and the amount of time exposed to stress.

We will use testing techniques and questionnaires to determine what phase you fit into.
What is the glycemic index?

Blood sugar spikes and dips can make you fat.

High-glycemic Chart

Blood Sugar

Time

Hunger

Hunger

Release Energy Quickly → Feel Hungry Sooner → Eat More!

Low-glycemic Chart

Blood Sugar

Time

Release Energy Slowly → Feel Satisfied Longer → Eat Less!

Pop Quiz:

What are the main adrenal drop times?
It’s all about the hormones!

Roles of steroid hormones include:

- Stress Handling
- Reproduction
- Energy Production
- Stable Blood Sugar
- Anti-Aging
- Strength, Stamina, and Vitality
- Brain Function, Mood, Cognition and Memory
How do you deal with stress?
Is your feedback loop functioning correctly?

Prolonged stress can shut down the negative feedback loop and cause problems such as adrenal hypo-responsiveness and major depression.\(^1\)

\(^1\) Dawson G., Ashman SB. The Effects of Early Adversity on Neurobehavioral Development. Volume 31, Page 256-257.
What is an adrenal gland?
Small yet powerful!

The outer zone, or cortex, accounts for 80% to 90% of the gland and secretes the corticosteroids, commonly called the adrenal steroids (cortisol and DHEAs).

The inner zone, or medulla, comprises 10% to 20% of the gland and secretes the catecholamine's epinephrine and norepinephrine.

Pop Quiz:
Why is whole food vitamin C more important than the synthetic version?
Circadian Rhythm

Highest in the morning and lowest at night

If you are waking up tired and having trouble getting to sleep, you may have issues with your cortisol production.
The Chinese Clock and Sleep

Tips to improve your sleep environment and habits:

- Turn off your lights and TV an hour before you plan on sleeping
- Try monochromatic green lighting
- Remove your TV from your bedroom
- Try using earplugs
- Try deep breathing
- Make sure your room is dark
- Try meditation
- Do not eat sugar or carbs before bed
- Try reading one hour before bed
- Exercise only in the morning or afternoon (never at night before bed)
- Reduce afternoon napping

If you are waking up at specific times during the night, you may have an organ imbalance.
What about the salt?

Salt is an electrolyte that balances fluids in the body.

Salts with high amounts of trace minerals and naturally occurring iodine will never be white. Look for a sea salt with a little color.

Pop Quiz:
How much salt should an adrenally fatigued person consume?
Test Time!
Now let’s get out the flashlights and blood pressure cuffs.

Postural Hypotension Test

- Lie down for 5 to 10 minutes in a quiet room with no distractions
- Take a blood pressure reading
- Stand and immediately take another blood pressure reading
- In a healthy individual, blood pressure should rise 15-20mm Hg
- If the second blood pressure reading falls, it indicates adrenal fatigue
- If you feel light-headed or dizzy when standing up from lying down, you may have adrenal fatigue or be dehydrated

Iris Contraction Test

- From one side of the head, shine the light across the eye
- Start timing when the pupil contracts
- A healthy adrenal response is over 30 seconds
- With adrenal fatigue, the pupil will be unable to hold a contraction
- Mark the time when the pupil begins to dilate

Now complete page 17 of your guide
Saliva Lab Test

Let’s find out exactly where you stand.

One of the most common ways to measure stress response is through cortisol. Cortisol can be measured through blood, saliva, or urine samples. We recommend testing the free and circulating hormones, because that is what your body is actually using.

Now complete page 19 of your guide (as much as you can)

- 4 x cortisol: helps evaluate stress response
- 2 x insulin: helps investigate blood sugar control
- DHEA: helps determine stress adaptation
- Secretory IgA: helps evaluate toll on immunity
- 17-OH progesterone: helps determine adrenal reserve
- Gluten antibodies: helps identify grain intolerance
Common Cortisol Ranges

Which one do you most resemble?

This saliva test can be done at home. It comes with four vials that you spit into then place into the freezer. One vial upon waking, one at late morning (10 am), one at early afternoon (2 pm), and one at bedtime. Mail the next day.
Adrenal fatigue is serious!
A custom program for you.

**Do these:**
- Eat before 10:00 am
- Avoid high-sugar fruits
- Eat every 2 to 3 hours
- Chew 30 times
- Sleep until 7-8 am
- Exercise mildly
- Eat whole, fresh food
- Eat sea salt (moderately)
- Always eat protein and fat with carbohydrates
- Mix 1-2 tablespoons of fresh essential oils (cold pressed olive, grape seed, safflower, flax, etc.) into grains, vegetables, and meats daily
- Combine beans with seeds and nuts
- Snack at the adrenal drop times (10, 2, 4)

**Avoid these:**
- Catching your second wind
- Taking care of everyone
- People who “steal” your energy
- Common allergy foods
- Eating large meals before bed
- Skipping meals
- Sugar and white flour
- Being critical of yourself
- Deep-fried foods
- Drinking sodas, juice, coffee, and alcohol
- Making someone else responsible for your health
The Adrenal Fatigue Diet
No Cheating!

Meal Planning Tips:
- Smaller meals throughout day
- Handful of raw nuts throughout day
- Preferred fruits: papaya, mango, plums, pears, kiwi, apples, grapes (only a few), cherries
- Avoid fruit juices, bananas, raisins, dates, figs, oranges and grapefruit
- Combine carbs, fats, and protein
- Eat every two to three hours
- Goat’s milk instead of cow’s milk
- Carob instead of chocolate
- Avoid hydrogenated and partially hydrogenated oils
- No deep frying
- Avoid fruit in the morning
- Worst thing: wake up, drink coffee or juice, go all day long without eating, then have one or two large meals in the evening

Pop Quiz:
What should you eat before 10 am?
Supplements and Herbs
A drug-free approach

Common Stress-Related Areas:
• Detoxification
• Structural
• Sugar Imbalances
• Stress Modification
• Sleep
• Electrolyte Balancing
• Immune Support
• Diet

We will be recommending whole food supplements and pharmaceutical-strength herbs based on the outcomes of your tests and symptoms in order to balance the nervous system.

Now, let us achieve a more enjoyable life.
Thanks for participating!

Grab a saliva test and schedule a time to enroll in our program.
